

Satori Divider

Reduce noise disturbance while adding elements of design to your workspace with the Satori Divider.

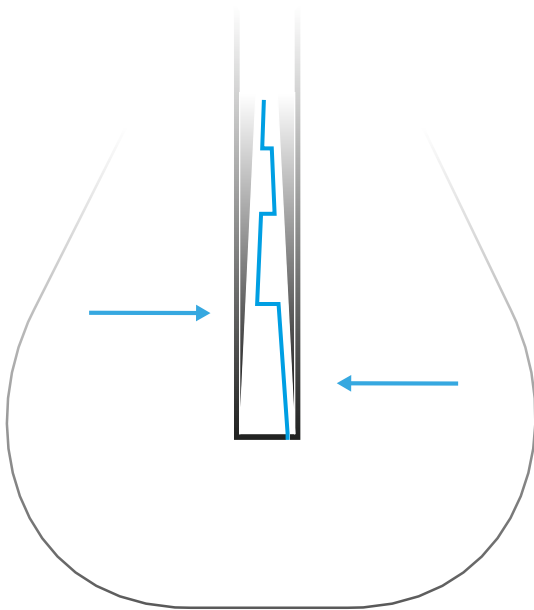

These acoustic screens help to divide up space, create privacy and absorb up to 40% of sound energy. Each Satori Divider comes with a black stand to easily move the divider between different areas.

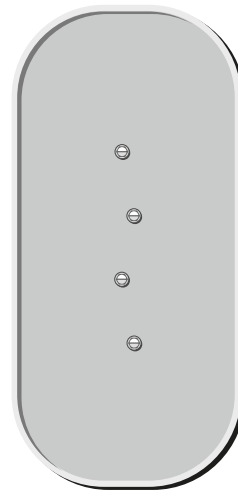

Satori Divider Assembly Instructions

1. Lay all the parts of the Satori Divider out on the floor. You will need two people to assemble the divider.

2. Place the two side panels of the base together so the zigzag pattern matches up along the bottom.

3. Turn the base plate over and insert the 4 x screws provided into the holes of the base plate. These 4 x screws will secure the two side panels.

4. Turn the base plate so it is upright. Slide the acoustic panel in between the two side panels of the base. Use the other screw provided (with male and female fitting) to secure the acoustic panel from both sides.
